# FLENDER Standard Couplings

## Flexible Couplings – RUPEX Series

### General information

#### Overview

**Coupling suitable for use in potentially explosive atmospheres.**

**Complies with the current ATEX Directive for:**

**CE** **Ex** II 2 G T4 / T5 / T6 D120 °C  
-30 °C ≤ T<sub>a</sub> ≤ +80 °C / +50 °C / +40 °C

**CE** **Ex** I M2

RUPEX pin and bush couplings link machine shafts and compensate for shaft misalignment with weak restorative forces. The torque is conducted through elastomer buffers, so the coupling has typically flexible rubber properties. Thanks to their robust design, RUPEX couplings are also suitable for rough operating conditions.

#### Benefits

RUPEX couplings can also hold loads when overloaded and are therefore especially suitable for drives for special safety and reliability requirements.

Torque shock loads and changing loads are no problem for robust, compact flexible RUPEX couplings.

The steel variant is also especially suitable for high-speed drives.

RUPEX couplings are fitted by putting together the coupling halves. Fitting with low torsional backlash is simplified by the barrel-shaped geometry of the buffers.

RUPEX couplings require little maintenance. Only the elastomer buffers, as wear parts, need be replaced and the coupled machines need not be moved to do so.

RUPEX couplings are suitable for reversing operation and horizontal and vertical fitting or fitting at any required angle.

#### Application

RUPEX couplings are available as a catalog standard in 26 sizes with a rated torque of between 200 Nm and 1300000 Nm.

The coupling is suitable for use at ambient temperatures of between -30 °C and +80 °C. By using alternative elastomer buffers, the permissible ambient temperature range can be extended to between -50 °C and +100 °C.

Frequently, the coupling is used to connect the gear shaft to the driven machine. In the case of drives without gear units, the cou-

pling is particularly suitable for operation in rough conditions or heavy-duty drives with electric motor drive. Ventilator drives with high ventilator mass and drives in the cement industry are typical applications.

Examples of particularly safety-relevant areas of application are cable railway drives, lifting gear for crane drives or escalator drives.

#### Design

A RUPEX coupling comprises two hub sections which are mounted on the machine shafts. The hub parts are connected positively by steel pins and elastomer buffers. The coupling can be fitted with add-on parts such as brake disks or brake drums. Up to size 360, the pins and buffers are fitted on one side. From size 400 up, the pins and buffers are fitted in the hubs on alternate sides.

##### Materials

##### Hubs

- Types RWN and RWB made of grey cast iron EN-GJL-250
- Types RWS and RBS made of steel

##### Flange

- Types RFN, RFS made of steel

##### Pin

Material steel 42CrMo4, surface fine-machined

##### Buffer material

Material/description	Hardness	Identification	Ambient temperature
<b>NBR standard type</b>	<b>80 ShoreA</b>	<b>Buffer black</b>	<b>-30 °C ... +80 °C</b>
NBR electrically insulating	80 ShoreA	Buffer green	-30 °C ... +80 °C
NBR soft	65 ShoreA	Buffer black with green dot	-30 °C ... +80 °C
NBR hard	90 ShoreA	Buffer black with magenta dot	-30 °C ... +80 °C
NR for low temperature	80 ShoreA	Buffer black with white dot	-50 °C ... +50 °C
HNBR high temperature	80 ShoreA	Buffer black with red dot	-10 °C ... +100 °C

##### Brake disks

- Type RWB made of EN-GJS-400 spheroidal graphite cast iron
- Type RBS made of steel

##### Brake drums

- Type RWB made of EN-GJL-250 grey cast iron
- Type RBS made of steel

# FLENDER Standard Couplings

## Flexible Couplings – RUPEX Series

### General information

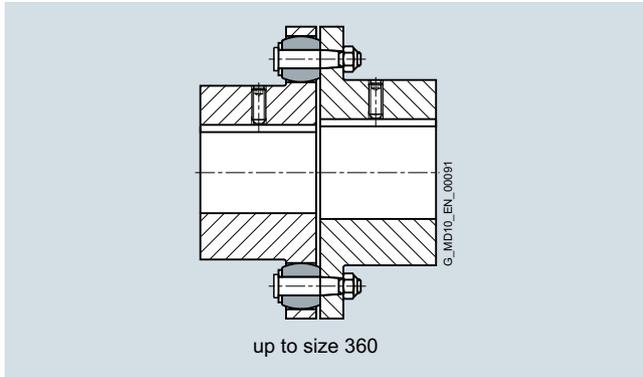

#### RUPEX pin and bush coupling types

Type	Description
RWN	Coupling made of grey cast iron
RWS	Coupling made of steel
RWB	Coupling made of grey cast iron with brake drum or brake disk
RBS	Coupling made of steel with brake drum or brake disk
RFN	Coupling made of grey cast iron in flange-shaft variant
RFS	Coupling made of steel in flange-shaft variant

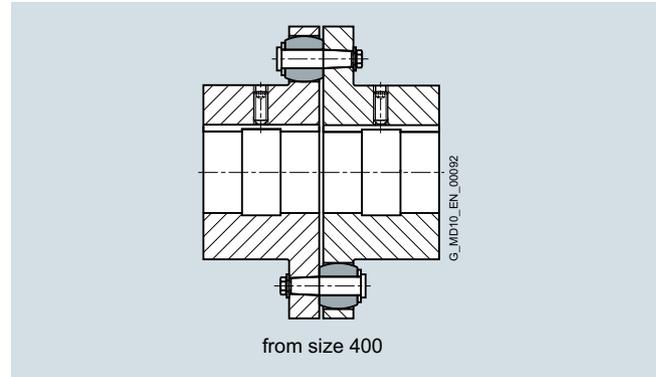

Further application-related coupling types are available. Dimension sheets for and information on these are available on request.

#### RUPEX pin and bush coupling types on request

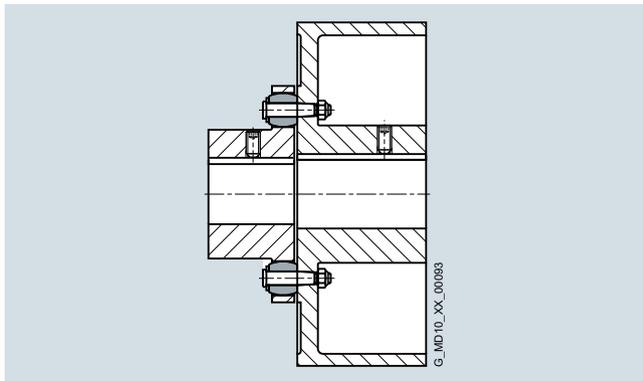

Type	Description
All	Coupling with axial backlash limitation
All	Coupling with pretensioned buffers
All	Coupling with lengthened pins and spacer sleeves
RKS	Coupling for engaging/disengaging during standstill
RWNH, RWSH	Coupling with extension piece
RBM	Coupling with lengthened pins for sliding rotor motors
RAK	Coupling combination RUPEX with ARPEX all-steel membrane coupling

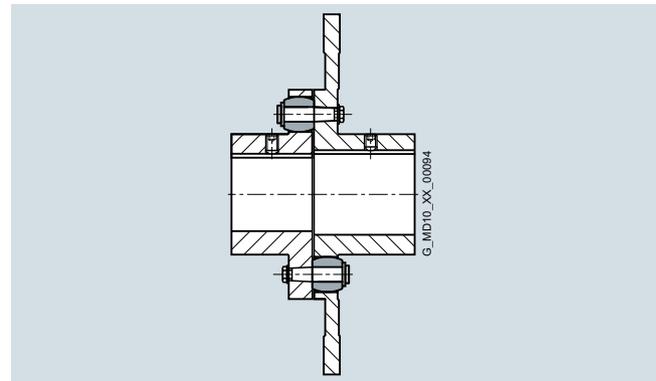

Types RWN/RWS – One-sided arrangement of pins and buffers

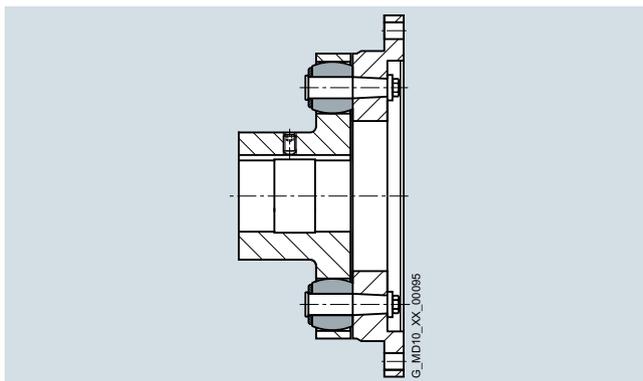

Types RWN/RWS – Alternate-sided arrangement of pins and buffers

Types RWB/RBS with brake drum

Types RWB/RBS with brake disk

Types RFN, RFS

# FLENDER Standard Couplings

## Flexible Couplings – RUPEX Series

### General information

#### Function

The motor torque is transmitted to the hub on the drive side via the shaft-hub connection, which is mostly designed as a keyway connection. With the aid of elastomer buffers mounted on steel pins, the torque is conducted to the hub on the output side.

The hub on the output side further transmits the torque to the driven machine or a gear unit located in between. Because of the primarily compression-loaded buffers, the coupling has a progressive torsional stiffness.

#### Technical data

All article numbers listed below apply to standard buffers of NBR material in the 80 ShoreA variant.

<sup>1)</sup> The maximum speed of the respective type must be noted. For further information on permissible shaft misalignment, please see the operating instructions.

# FLENDER Standard Couplings

## Flexible Couplings – RUPEX Series

### General information

For maximum coupling torque:

$$T_{Kmax} = 3.0 \cdot T_{KN}$$

For overload torque:

$$T_{KOL} = 4 \cdot T_{KN}$$

For coupling fatigue torque:

$$T_{KW} = 0.20 \cdot T_{KN}$$

For fitting, a maximum gap dimension of S max. = S + ΔS and a minimum gap dimension of S min. = S – ΔS are permitted.

#### Torsional stiffness and damping

The values stated in the above table apply to a capacity utilization of 50 %, an excitation amplitude of 10 %  $T_{KN}$  with the frequency 10 Hz and an ambient temperature of 20 °C. Dynamic torsional stiffness is dependent on load and increases in proportion to capacity utilization. The following table shows the correction factors for different nominal loads.

$$C_{Tdyn} = C_{Tdyn 50\%} \cdot FKC$$

Correction factor FKC	Capacity utilization $T_N / T_{KN}$								
	20 %	40 %	50 %	60 %	70 %	80 %	90 %	100 %	
65/80/90 ShoreA	0.51	0.83	1.00	1.18	1.38	1.58	1.80	2.03	

#### **The damping coefficient is $\Psi = 1.4$**

Furthermore, torsional stiffness and damping depend on the ambient temperature and the frequency and amplitude of the torsional vibration excitation. More precise torsional stiffness and damping parameters on request.

With elastic couplings the manufacturing process of the rubber elements and their aging primarily influence the rigidity value  $C_{Tdyn}$ . For this reason calculation must be made with a tolerance for the dynamic rigidity of  $\pm 20\%$ . The specified damping coefficient  $\Psi$  is a minimum value with the result that the damping performance of the coupling corresponds at least to the specified value.

#### Permitted shaft misalignment

The permitted shaft misalignment depends on the operating speed. As the speed increases, lower shaft misalignment values are permitted. The following table shows the correction factors for different speeds.

The maximum speed for the respective coupling size and type must be observed!

$$\Delta K_{perm} = \Delta K_{1500} \cdot FKV$$

	Speed in rpm			
	500	1000	1500	3000
Correction factor FKV	1.7	1.2	1.0	0.7

For fitting, a maximum gap dimension of S max. = S + ΔS and a minimum gap dimension of S min. = S – ΔS are permitted.

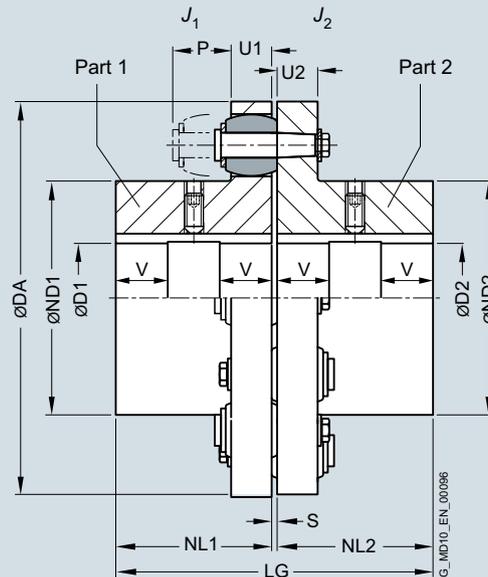

Shaft misalignments  $\Delta K_r$  and  $\Delta K_w$  may occur simultaneously.

From size 560 bores D1 and D2 are each provided with a recess of  $D = +1$  mm halfway along the hub.  $V \approx 1/3$  NL

The hub diameter of the component part is assigned according to the diameter of the finished bore. Where bore diameters overlap, the component with the smaller hub diameter is always selected.

Weight and mass moments of inertia apply to maximum bore diameters.

Ordering example:  
 RUPEX RWN coupling, size 710,  
 Part 1: hub left with bore 180H7 mm, with keyway to DIN 6885 and set screw,  
 Part 2: hub right with bore 200H7 mm, with keyway to DIN 6885 and set screw.

Article No.:  
**2LC0131-8AA99-0AA0**  
**L2B+M2D**

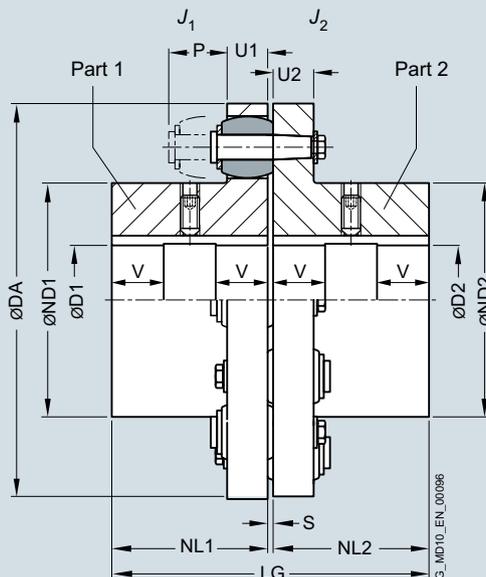

The article number applies to standard buffers of 80 ShoreA; the article number for alternative buffer types is available on request.

- øD1:
- Without finished bore up to size 500, from size 560 for 1st diameter range D1 – Without order codes
  - Without finished bore from size 560 for 2nd diameter range D1 – Without order codes
  - Without finished bore from size 560 for 3rd diameter range D1 – Without order codes
  - With finished bore – With order codes for diameter and tolerance (article number without "-Z")

1  
2  
3  
9

From size 560 bore D1 is provided with a recess of  $D = +1$  mm halfway along the hub.  $V \approx 1/3$  NL

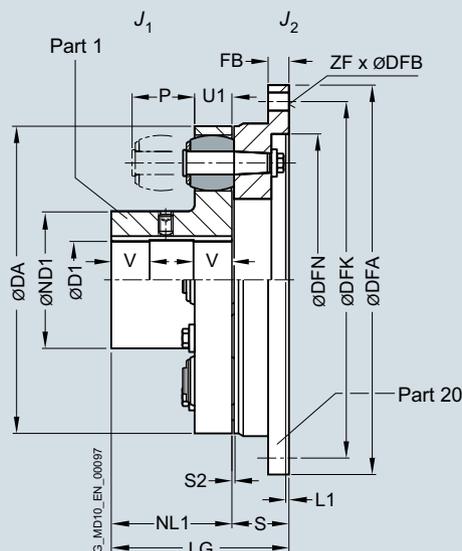

Weight and mass moments of inertia apply to maximum bore diameters.

The article number applies to standard buffers of 80 ShoreA; the article number for alternative buffer types is available on request.

### Brake disk diameter DB in accordance with customer specification.

Additional sizes are available on request. Further dimensions for part 3 on request.

Maximum speed in rpm:

$$n_{Kmax} = 1146/DB \quad DB \text{ in m}$$

Observe maximum speed of type RWN!

Mass moments of inertia and weights can be sufficiently precisely determined as follows:

- Mass moments of inertia in  $\text{kgm}^2$ :  
 $J_1 = J_1$  from type RWN  
 $J_2 = J_2$  from type RWN +  $710 \cdot BB \cdot DB^4$  BB and DB in m
- Weight in kg:  
 $m = m$  from type RWN +  $5700 \cdot BB \cdot DB^2$  BB and DB in m

Ordering example:

RUPEX RWB coupling, size 252,

Part 1: Bore D1 = 48H7 mm, keyway to DIN 6885-1 and set screw,

Part 3: Brake disk DB = 630; BB = 30 mm; D6 = 350 mm, bore 42H7 mm, keyway to DIN 6885-1 P9 and set screw.

Hub reduced to NL2 = 200 mm

Coupling micro-balanced G6.3 at 1500 rpm in accordance with the half parallel key standard.

Mass moment of inertia:

$$J_1 = 0.07 \text{ kgm}^2$$

$$J_2 = 0.12 \text{ kgm}^2 + 3.3 \text{ kgm}^2 = 3.42 \text{ kgm}^2$$

Weight:

$$m = 26.3 \text{ kg} + 68 \text{ kg} = 94.3 \text{ kg}$$

Article No.:

**2LC0130-8AE99-0ZA0-Z**

**L1B+M0X+P0Y+W02**

Plain text to P0Y:

**DB = 630 mm; BB = 30 mm;**

**D6 = 350 mm; NL2 = 200 mm**

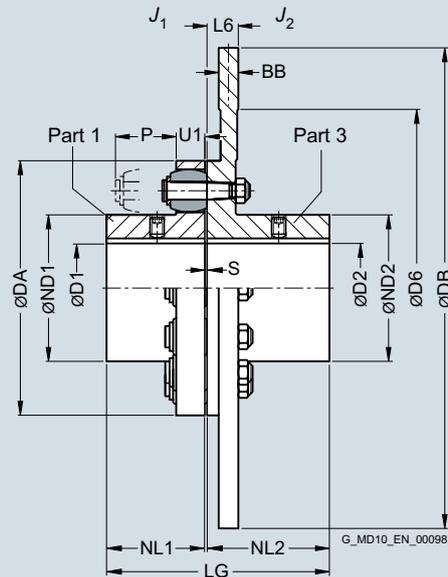

The article number applies to standard buffers of 80 ShoreA; the article number for alternative buffer types is available on request.

# FLENDER Standard Couplings

## Flexible Couplings – RUPEX Series

Type RBS with brake disk to DIN 15432  
Sizes 144 to 360

### Brake disk diameter DB in accordance with customer specification.

Additional sizes are available on request. Further dimensions for part 3 on request.

Maximum speed in rpm:

$$n_{Kmax} = 1528/DB \quad DB \text{ in m}$$

Observe maximum speed of type RWS!

Mass moments of inertia and weights can be sufficiently precisely determined as follows:

- Mass moments of inertia in  $\text{kgm}^2$ :  
 $J_1 = J_1$  from type RWS  
 $J_2 = J_2$  from type RWS +  $770 \cdot BB \cdot DB^4$  BB and DB in m
- Weight in kg:  
 $m = m$  from type RWS +  $6160 \cdot BB \cdot DB^2$  BB and DB in m

Ordering example:

RUPEX RBS coupling, size 252,

Part 1: Bore D1 = 48H7 mm, keyway to DIN 6885-1 and set screw,

Part 3: Brake disk DB = 630 x BB = 30 mm, D6 = 350 mm, bore 42H7 mm, keyway to DIN 6885-1 P9 and set screw.

Hub reduced to NL2 = 200 mm

Coupling micro-balanced G6.3 at 1500 rpm in accordance with the half parallel key standard.

Mass moment of inertia:

$$J_1 = 0.07 \text{ kgm}^2$$

$$J_2 = 0.12 \text{ kgm}^2 + 3.6 \text{ kgm}^2 = 3.72 \text{ kgm}^2$$

Weight:

$$m = 25.8 \text{ kg} + 73 \text{ kg} = 98.8 \text{ kg}$$

ØD1:

- Without finished bore up to size 500, from size 560 for 1st diameter range D1 – Without order codes
- Without finished bore from size 560 for 2nd diameter range D1 – Without order codes
- Without finished bore from size 560 for 3rd diameter range D1 – Without order codes
- With finished bore – With order codes for diameter and tolerance (article number without "-Z")

ØD2:

- Without finished bore up to size 500, from size 560 for 1st diameter range D1 – Without order codes
- Without finished bore from size 560 for 2nd diameter range D2 – Without order codes
- Without finished bore from size 560 for 3rd diameter range D2 – Without order codes
- With finished bore – With order codes for diameter and tolerance (article number without "-Z")

From size 560 bore D1 is provided with a recess of  $D = +1$  mm halfway along the hub.  
 $V \approx 1/3$  NL

### Brake disk diameter DB in accordance with customer specification.

Additional sizes are available on request. Further dimensions for part 3 on request.

Maximum speed in rpm:

$$n_{Kmax} = 1528/DB \quad DB \text{ in m}$$

Observe maximum speed of type RWS!

Mass moments of inertia and weights can be sufficiently precisely determined as follows:

- Mass moments of inertia in  $\text{kgm}^2$ :  
 $J_1 = J_1$  from type RWS  
 $J_2 = J_2$  from type RWS +  $770 \cdot BB \cdot DB^4$  BB and DB in m
- Weight in kg:  
 $m = m$  from type RWS +  $6160 \cdot BB \cdot DB^2$  BB and DB in m

### Ordering example:

RUPEX RBS coupling, size 450,  
Part 1: Bore D1 = 130H7 mm, keyway to DIN 6885-1 and set screw,  
Part 3: Brake disk DB = 900; BB = 30 mm; D6 = 500 mm; bore 120H7 mm, keyway to DIN 6885-1 P9 and set screw.

Coupling micro-balanced G6.3 at 1500 rpm in accordance with the half parallel key standard.

Mass moment of inertia:

$$J_1 = 1.74 \text{ kgm}^2$$

$$J_2 = 1.74 \text{ kgm}^2 + 15 \text{ kgm}^2 = 16.74 \text{ kgm}^2$$

Weight:

$$m = 25.8 \text{ kg} + 149 \text{ kg} = 174.8 \text{ kg}$$

Article No.:

**2LC0131-4AH99-0ZA0-Z**  
**L1U+M1S+P0Y+W02**

Plain text to P0Y:

**DB = 900 mm; BB = 30 mm;**  
**D6 = 500 mm; NL2 = 322 mm**

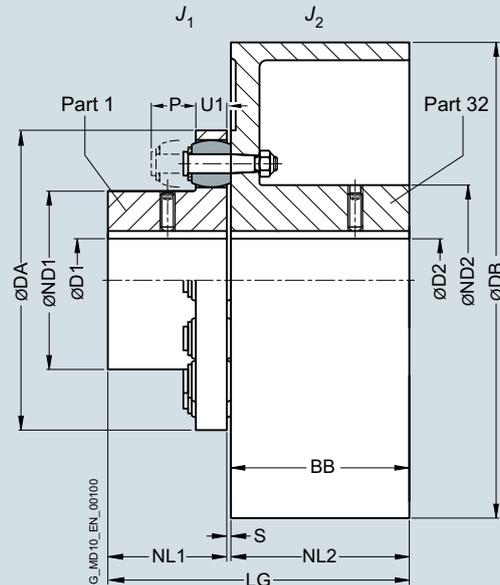

The article number applies to standard buffers of 80 ShoreA; the article number for alternative buffer types is available on request.
